GenesisL1 templates encourage exact references, explicit provenance, reproducible methods where appropriate, and honest separation of evidence, interpretation, limitations, and future work. Use only the modules that serve the document.

Summary

Summarise the central observation, question, argument, or result in a short paragraph.

1 Context

Explain the scientific setting and why a concise letter is the appropriate form.

CENTRAL QUESTION

What is the single question, observation, or claim the reader should examine?

2 Contribution

Present the observation, hypothesis, critique, technical idea, response, or preliminary result.

Evidence / observation

Distinguish what was observed, measured, calculated, implemented, or documented from what is inferred.

Interpretation

Explain what the evidence may mean and mention credible alternatives.

Limitations and uncertainty

State the most important uncertainty and what evidence could revise the interpretation.

3 Proposed test or next step

Optional. Describe the smallest useful experiment, analysis, replication, discussion, or implementation step.

Invitation / next step

Invite focused critique, independent testing, data contribution, an alternative explanation, or collaboration.
